Period fo	The MAILING DATE of this communication a or Reply	ppears on the	cover sheet with the c	orrespondence ad	idress					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filled after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply secified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2633

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1, 2, 4-7 and 9-12 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claim 1, 2, 4-7 and 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mayeux US 5,390,040 (Mayeux) in view of Korevaar US 6,490,066 B1 (Korevaar) and Fischer et al. US 6,091,529 (Fischer).

Re claim 1, Mayeux disclosed

A transceiver for transmitting signals coming from a source (Figure 2 #50) of signal-carrying light to another transceiver and for receiving signals, said transceiver comprising a receiving reflecting surface (Figure 2 #10) for reflecting the received signal-carrying light, wherein it further comprises an aperture for outputting the light to be transmitted, said single aperture extending near to the outer edge of the receiving surface.

Mayeux does not disclosed transmitting or receiving coherent light.

Mayeux does not disclose that the receiving surface is defined by an outer edge.

Korevaar disclosed a laser/microwave transmitter communication system that uses a single aperture that extends to an outer edge (20 of Figure 2A), see col./lines: 4/30-40, 5/42-60).

It would have been obvious to one of ordinary skill in the art at the time of invention to use a single aperture in the Mayeux invention because it simplifies boresighting and angle tracking.

Art Unit: 2633

Mayeux does not disclosed transmitting or receiving coherent light. Fischer disclosed using coherent light. It would have been obvious to one of ordinary skill in the art at the time of invention to use coherent light in the Mayeux invention for the advantage of keeping the optical frequency used for transmission freely selectable within a wide range, as disclosed by

Fischer (Col. 2, lines 50-60).

Re claim 2, Mayeux disclosed

A transceiver including a main dish, wherein said main dish further comprises a first transmitting reflecting surface (Figure 2 #10) for reflecting the coherent light to be transmitted in a direction substantially perpendicular to the incoming direction.

Re claim 5, Mayeux disclosed

A transceiver wherein said output aperture is formed in the main dish. (Figure 2)

Re claims 6 and 7, Mayeux disclosed

A transmission system wherein it comprises a first and second transceivers placed at a distance one from the other and arranged in such a way that, considering a small divergence, the coherent light beams emerging from the transmitting aperture of the first transceiver overlap at the surface of the second transceiver and vice versa. (Figure 2).

Re claims 4, 9 and 10, Mayeux disclosed wherein said output aperture is substantially in the form of an annulus and is formed on a plane surface. (Figure 2).

Re claims 11 and 12, the modified combination of Mayeux and Fischer further disclosed where said transmit and receive beams are spatially separated (Figure 2).

Art Unit: 2633

Allowable Subject Matter

4. Claims 3 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

 Any inquiry concerning this communication or earlier communications from the examiner should be directed to David C. Payne whose telephone number is (571) 272-3024. The examiner can normally be reached on M-F, 7a-4p.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Jason Chan can be reached on (571) 272-3022. The fax phone number for the organization where this

application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
